Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

This communication is in response to amendment received on 12/20/06.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1 – 24 are rejected under 35 U.S.C. 102(e) as being anticipated by Haji-Sheikh et al. (6,784,659).

As to claims 1 - 24, Haji-Sheikh et al. (hereinafter Haji) discloses a speed and direction sensor comprising a ring magnet (100, fig. 4) couplable to the rotatable member (not shown), the magnet defining magnetic flux lines (2102, 104, 105), said magnetic flux lines having a magnetic flux direction within the magnet (100) and emanating from a magnetic pole (N) of a surface (surface of N pole) of said ring magnet (100) and returning to an opposite magnetic pole (S) of a second magnetic surface (surface of S pole), portions of the magnetic flux lines being main flux lines emanating away from the magnet (100) and aligned within 45 degrees with the direction of magnetization, and portions of the magnetic flux lines being return flux lines returning in directions forming an angle of more than 45 degrees with the direction of magnetization;

and at least one magnetic field sensor (130) disposed in at least one of said return flux lines and outputting a signal representative of the angular position of the magnet (100)

(Note col. 4, lines 45 - 67).

Response to Arguments

Applicant's arguments with respect to claims 1 - 24 have been considered but are moot in view of the new ground(s) of rejection.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Reena Aurora whose telephone number is 571-272-2263. The examiner can normally be reached on Monday - Friday, 7:00 - 3:30.
